SUMMARY

New-grad AI/software engineer (M.S. Computer Science, George Mason University, 2026) who ships production AI systems end-to-end — LLM fine-tuning pipelines on H100 clusters, agentic products, and full-stack platforms. Comfortable owning discovery through deployment alongside non-technical stakeholders.

SKILLS

- Languages:** Python, TypeScript/JavaScript, Java, SQL, C++, Bash
- AI/ML:** Claude API & tool use, OpenAI APIs, RAG, fine-tuning (LoRA/QLoRA), Hugging Face, evals, prompt engineering, structured outputs, Pydantic v2
- Web/Backend:** Next.js, React, Node.js, NestJS, FastAPI, REST APIs, microservices, PostgreSQL, Redis
- Infrastructure:** AWS, Docker, Linux/SLURM, Vercel, Git, systemd
- AI-Assisted Dev:** Claude Code, GitHub Copilot, Cursor, Gemini

EXPERIENCE

Graduate Research Assistant — AI Systems Engineering Aug 2025 – May 2026

George Mason University, Costello College of Business — Fairfax, VA

- Built **llm-forge**, a 12-stage config-driven LLM fine-tuning pipeline on a 4× H100 SLURM cluster, cutting time-to-experiment **50%+** for faculty and doctoral research teams.
- Hardened the pipeline with **~900 automated checks** (Pydantic v2), catching malformed configs and data-schema drift before costly multi-GPU runs.
- Shipped a Claude API extraction service converting **500+ multi-page legal PDFs** into schema-validated JSON at **95%+ field accuracy**, cutting manual processing ~80%.
- Served as embedded technical point of contact for faculty and doctoral teams, owning solutions end-to-end from discovery through deployment.

Undergraduate Researcher — Applied ML & AI Systems Jan 2022 – May 2024

KL University — India

- Built an ensemble ML system (bagging, boosting, stacking) reaching **93% accuracy** and **92% F1**, validated for significance with t-tests and ANOVA.
- Evaluated ANN vs. CatBoost and integrated CatBoost (**89% accuracy, 91% precision**) into a web analytics dashboard.
- Co-authored **5 peer-reviewed publications** (2 first-author, 50+ citations) and filed an Indian patent.

PROJECTS

SmartRemit (TypeScript, NestJS, PostgreSQL, Redis, Claude tool use) — WhatsApp-native AI remittance platform where an AI agent runs full transfers conversationally (live quotes, KYC, approval, receipts) across 8 corridors; compliance as infrastructure (sanctions screening, velocity limits, audit trails) with sub-200ms intent parsing. **smartremit.ai**

IntelliDoc-Nexus (Python, multi-agent RAG, Vercel) — Production-grade multi-agent document-intelligence platform with citations: chunking, embeddings, vector search, and reranking over long documents. **intellidoc-nexus.vercel.app**

JetBot — Edge AI Agent (Python, SQLite/FTS5, systemd, Linux) — Telegram-controlled agent on Jetson Orin Nano with human-approval gates guarding destructive actions; systemd + cgroups v2 resource isolation balancing LLM inference on constrained edge compute.

EDUCATION

M.S. Computer Science — George Mason University, Fairfax, VA Aug 2024 – May 2026

B.Tech Computer Science — KL University, India (CGPA 8.7/10) May 2020 – May 2024

CERTIFICATIONS & PUBLICATIONS

Certifications: AWS Certified AI Practitioner (Nov 2025) · NVIDIA Certified Associate: Generative AI & LLMs (Feb 2026) · Anthropic: Claude Code in Action (Dec 2025) · Anthropic AI Fluency

Publications & Patent: 5 peer-reviewed publications (2 first-author, 50+ citations) · Patent (India): Smart FuelGuard — GPS-integrated intelligent fuel management.
